

## Create interactive tutorials

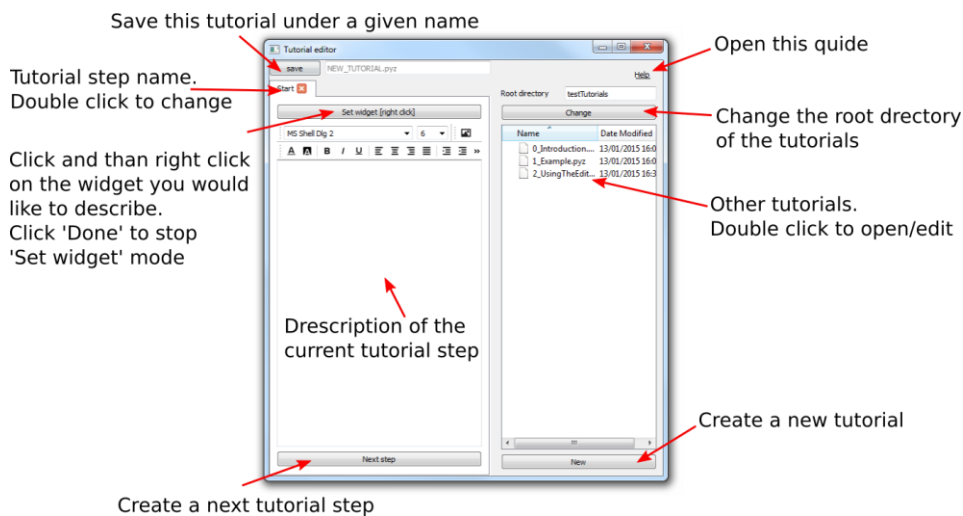

### Idea

The creation of easy to follow interactive tutorial without the need of any programming of background knowledge.

### Procedure

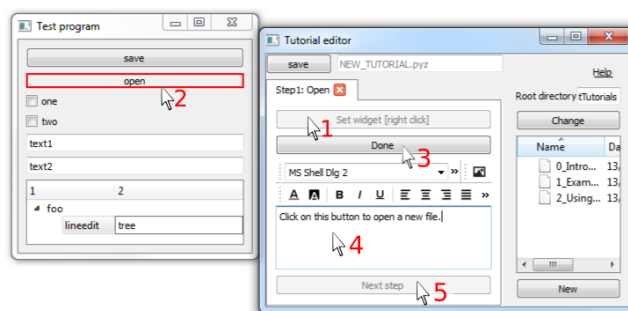

Specify a widget (an item within a window e.g. a button or a text) to interact with within the tutorial and add an explanatory text. Repeat this for every step of the tutorial you create.

### Tutorial editor window

### Explanation step by step

1. Left click on the shown button to enable the selection of the widget you would like to mark-up.
2. Select the appropriate widget through right clicking on it.
3. Click 'Done' to disable the selection mode.
4. Add some text to explain what you want the user to do. You format the text and insert images.
5. Click on 'next step' to create another step. You can change a steps name through double clicking on the tab heater.

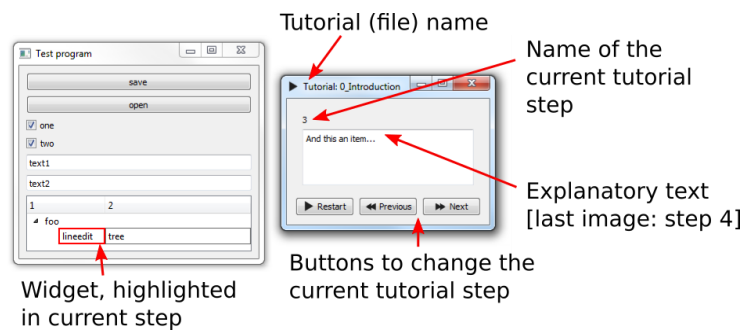

If you have defined all steps click on 'Save' to save your tutorial to file.

## Run an tutorial

If you run a tutorial you open the session you used to create the tutorial.

In addition an extra window opens to guide you through the tutorial:

## Limits and known bugs

- Menu bar items cannot be selected (highlighted)
